

Flexible tank storage solutions aimed at adapting to the needs of the market

Located at the entrance to the Baltic, Skaw Roads and the commonly used STS anchorage sites for tankers you will find Port of Aalborg's 242,000 cubic metre tank storage facility. We are continuously striving to explore new possibilities for upgrading our current storage facilities to meet your needs or to develop new storage capacity for future markets.

**PORT OF
AALBORG**

gate to great

Tank Storage South

Tank Storage North

Product

The terminal is approved for diesel, additives, Marine Gas Oil and other Class-III products.

Pipeline

Own separate pipeline to terminal from quay. Possible to pump product to/from other terminals at the port.

Pumping rate

Inflow rate approx. 1,000 -1,200 m³/h
 Outflow rate approx. 450-550 m³/h

Tank	Capacity	Product	Insolated & Heated
1	13,200 m ³	MGO/Diesel	No
2	3,000 m ³	MGO/Diesel	No
3	3,200 m ³	MGO/Diesel	No
4	2,250 m ³	MGO/Diesel	No

Product

The terminal is approved for Heavy Fuel Oils, Vacuum Gas Oil and other products with a pour point of around 8 degrees Celsius.

Pipeline

2 x separate pipelines to/from terminal. Pipelines are insulated and heat traced and can be emptied by both compressed air and pigging.

Pumping rate

Inflow rate approx. 1,000-1,800 m³/h
 Outflow rate approx. 1,000-1,500 m³/h

Heating & Insolation

All tanks and pipelines are insulated and heated. The heating has been recently upgraded to reduce CO₂ and is now done by excess district heating from factories and thermal pumps

Tank	Capacity	Product	Insolated & Heated
10	55,000 m ³	Fuel/VGO	Yes
11	55,000 m ³	Fuel/VGO	Yes
12	55,000 m ³	Fuel/VGO	Yes
13	55,000 m ³	Fuel/VGO	Yes

General port information

Water depth alongside South:	9.50 metres
Water depth alongside North:	10.00 metres
Water depth in fairway/roads	>10.00 metres
Maximum vessel length (LOA)	250.00 metres
Maximum vessel beam (BEAM)	No restrictions
Max draft vessel	9.40 metres*
Tidal difference	+/- 0.5 metres
Water density	1,020 (brackish water)

*With a draft above 9.40 metres, independent confirmation from local agent/pilot needs to be in order.

Possibilities to upgrade

We are ready to invest in custom upgrades to meet your needs.

Already scheduled upgrades entail:

- Solid tank yards allowing all Class III products (Fuel/Gasoil)
- Possible addition of a truck for loading to the terminal
- E-methanol

Central and optimal location for tank storage

We are with you all the way

At Port of Aalborg, your liquids are safe in our hands, no matter what capacity you are storing. As your highly competent partner, we ensure efficient, secure, and optimal handling and storage. From receipt to dispatch, our experienced team of advisers will assist and guide you through the entire process, alleviating any concerns you may have along the way.
